CONSERVATION COMPLIANCE PLAN FOR TRACT t1246
McNeal, Duane

CONSERVATION SYSTEM SUMMARY FOR FIELDS 1 & 2

A CROP ROTATION of corn soybeans will be used on these fields. Beans will be planted narrow row (less than 20"). When HEL fields are used for CU, diverted acres, set aside, Acreage Conservation Reserve, or other approved non-cultivation programs, cover will be seeded to protect against wind and water erosion.

All planting and tillage operations will be performed ACROSS THE SLOPE (with a predominant row grade of 3%).

The following CONSERVATION TILLAGE system will be used: Soybean stubble is spring tilled leaving at least 20% of the ground covered by residue after planting corn. Soybeans are no-tilled into corn stalks leaving at least 50% of the ground covered by residue after planting.

GRASSED WATERWAYS and FIELD BORDERS are required in locations shown on the conservation plan map.
